

# Mountaire Farms Chiller Installation

*This project required engineering and execution of a system to install a thirty-one foot Morris and Associates vessel through a 10'x 10' opening, fourteen feet in the air. The project was further complicated by the lack of space—only seventeen feet of clearance existed between the two buildings. Install manufactured a custom rigging cradle in which the vessel was placed in order to accomplish this amazing task. The vessel weighed 8500 lbs.*
